## Bengali word typing software

Avro Keyboard is the first free Bangla typing software for Windows. Type Bangla everywhere- write documents, spreadsheets, send Bangla email, chat in Bangla, write Bangla blog or design Bangla web pages, anything is possible! Full Unicode complaint. Supports all popular methods of Bangla typing - English to Bangla phonetic typing, fixed keyboard layout based typing, and mouse-based Bangla types. The built-in Keyboard Layout Editor also allows users to create new Bangla keyboard layouts or edit existing layouts. User-friendly interface, easiest typing system, lots of type automation tool, free online support makes it the most popular Bangla typing software of today. Avro Keyboard was born in the 26th March 2003 (The Independence Day of Bangladesh), bringing a new era in Bangla computing. It's flexible, beautiful, feature rich, fully customizable, user-friendly and already has a lot of typing automation tools you never imagined! Avro Keyboard, simply the best Bangla Type Software, breaks all the old records, destroys obstacles, rewrites history and reconstructs tradition! The aim of this project is to add all popular Bangla typing methods from Bangladesh and India in one interface. Current release supports English to Bangla Phonetic type support for home users, Mouse Based Bangla type support for newbies, and for professionals traditional keyboard-based Bangla type support. Keyboard layouts that are added with the current release are - Probbat, Munir Optima, Avro Easy - An easy-to-learn keyboard layout from OmicronLab, Bornona - The easiest Bangla keyboard layout we've found so far! From The Safeworks. National (Jatiya) - Standard Bangla Keyboard Layout in Bangladesh designed by Bangladesh Computer Council (BCC). Read below for more information. Avro Keyboard works as a system-level keyboard interface. You type Bangla anywhere with all typing methods (English to Bangla phonetically typing, type-based keyboard layout, mouse-based typing) supported by Avro Keyboard. Flexible interface: Avro Keyboard offers a much more flexible user interface for even novice computer users. It's much better than Windows Input Locale because there's no need to edit your system language from the control panel. Users can use Avro keyboard and any other keyboard at the same time in any language defined in the control panel. It is possible to use Hindi, American English, British English, Japanese, French etc. any language as a system language and Avro Keyboard to use Bangla/Bengali. When Avro Keyboard is System Default mode, users are able to use their system language when in Bangla Keyboard mode, no matter what language is active in the system, only Bangla typing is possible. Two user Modes: Most Bangla type softwares only provide system drawer-based keyboard interface for users. Here Avro Keyboard has two different and full functional interfaces - Top Bar on desktop, Icon on system drawer. Users are free to use any mode that fits best. Even The Top Bar is able to appear as semi-transparent when inactive so you see behind it! Customizable mode switching (Single key/key combination): You use Single Key Mode Switching using a key from F1 to F12 to switch between Bangla keyboard mode and System Keyboard mode. There is also ctrl + Spcae key combination option. Use what you want. Auto Keyboard Mode Tracking: Like Windows keyboard management, Avro Keyboard can track the system default Bangla keyboard modes between all applications. Layout Viewer: This is a must have feature for any virtual keyboard interface like Avro Keyboard. But all including Microsoft seem to be watching. This handy tool allows users to see the actual image of the current keyboard layout when they need it. Now there's no need to print or draw a keyboard layout and attach it to your computer table. This keyboard layout viewer is fully flexible, using zoom and zoom for a better viewing purpose. In fact, this Layout Viewer can be configured to automatically get into bangla mode and disappear back into system keyboard mode, fun choice when you learn a new keyboard layout! Open fonts (OTF) you bangla and English type in the same font. All you have to do is change keyboard mode. Bangla search/sort: UNICODE standard Bangla types you search/sort Bangla texts in an accurate way without hassle. Very useful when you work in spreadsheet or database application. Faster Bangla types: Like older Bangla types, you don't have to change the fonts between Bangla and English every time you change keyboards. Again, for using some matra/cart/short form of Bangla vowels like o-cart, ou-cart, you only use a key to type them. These features have made Avro Keyboard a perfect choice for professional typists for Bangla types. Phonetic Bangla typing: Bangla typing gets its most modern form in Avro keyboard. Instead of using symbolic types like old mechanical typewriters, you use a simple phonetic typing method. Bangla typing is no longer a nightmare! Bangla email: Outlook Express and other email clients that support UNICODE will have you emailed in Bangla using Avro keyboard. Bangla chat/Bangla instant messaging: Some instant messengers like MSN Messenger you chat in Bangla. Avro keyboard lets you even type Bangla and English in one sentence in MSN Messenger. There is not even a need to use an extra plug-in! Bangla font compatibility: Avro Keyboard is compatible with any UNICODE-supported Bangla font. Even if you can't afford to buy some commercial/shareware UNICODE compliant Bangla types of software, you can use the fonts of that software and use them with Avro Keyboard for Bangla typing. As the name suggests, easy learn Bangla plans to help users learn to read, speak and write in Bengali, expertly. So, make your choice and start writing expertly with these easy-to-use programs. RELATED REPORTS: More than 220 million native speakers with an additional 30 million foreign speakers bringing it to more than 250 total speakers make it one of the most spoken languages (ranked sixth) in the world. The national anthem of Bangladesh, The national song and the national anthem of India is composed in Bengali. During 1000-1200 CE, Bengali evolved from the east of the Middle Indo-Aryan dialects such as the Magadhi Prakrit and Pali, which evolved from a group of dialects close to Vedic and classical Sanskrit. Literary Bengali saw loans of classical Sanskrit, preserving spelling, while pronunciation to match that of Bengali, during the period of Middle Bengali. Bengali binds together a culturally diverse region and makes an important contribution to Bengali nationalism. In former East Bengal, now known as Bangladesh, the love of the language led to the Bengali language movement. During this movement, on February 21, 1952, several people were killed during protests to gain his recognition as a state language and to maintain his writing in Bengali script. Bengali originated from the eastern Middle Indo-Aryan dialect of the Indian subcontinent. Magadhi Prakrit and Pali, the earliest recorded spoken languages in the region and the language of Gautama Buddha born in Nepal, evolved in the early of the first millennium CE to the Jain Prakrit or Ardhamagadhi. Ardhamagadhi, as with all the Prakrits of northern India, began to give way to what Apabhraṅṣa (Corrupted grammar) languages are called just before the beginning of the first millennium. The local Apabhraṅṣa language of the eastern subcontinent Purvi Apabhraṅṣa or Abahatta (Meaningless Sounds), eventually evolved into regional dialects, which in turn formed three groups: the Bihari languages, the Oriya languages and the Assamese-Bengali languages. Characters Set (Alphabets and Bengali character set is divided into 21 vowels, 36 consonants and modifiers. The vowels themselves can be divided into dependent and independent vowels. Along with consonants consonants vowels there are a number of special modifiers such as Virama, Candrabindu, Anusvara, Visarga. Moreover, it also has its own figures. Word processing: The independent vowels can be combined with consonants in different ways. For example, it can be merged to the right, left, and also above and below. In old typewriters and non-standard Bengali encodings, the vowels attached to the left character are first written, followed by consonant. The Unicode Standard requires typing order on the script consonant and vowel rather than other way around. This applies whether the vowel appears visually after or before the constant. For the rendering process, the visual placement is treated separately. Therefore, if the Unicode encryption process is followed, no rescheduling of the characters is required. Required.
